SUMMARY

Frontend engineer with 8+ years of React and 6 of TypeScript. For the last four years I've worked on Mango's checkout and payment flow, which takes orders from more than 20 million customers in 110+ countries. I'm used to owning a feature from the first conversation with product to keeping it healthy in production. In 12/2025 I founded Referent, an AI company, and that changed how I write software: AI agents do most of the coding now, and my job is to define the work and review it.

EXPERIENCE

Founder and CEO · Referent Software

12/2025 - Present · Burgos, Spain (remote)

- Started Referent in 12/2025 and incorporated it as Referent Software, S.L. in 08/2026. We're two people building an AI layer over companies' closed systems (custom ERPs, TMS, WMS) that answers questions about their data, cites the source and does the follow-up work.
- The company runs AI-first, and so does my engineering. I work through a harness built around Claude Code and Grok Bot: every repo has written rules the agents follow, every task starts as a GitHub issue and ends as a pull request with CI, and nothing merges until I've reviewed the diff. I rarely edit code by hand: I scope tasks, review PRs and send them back when something isn't right, and I ship far faster than when I typed it all myself.
- Built with our technical lead a pipeline that watches PLACSP and seven regional procurement platforms, has Claude analyse each tender's documents and posts the ones that fit to Discord for us to approve. In production on a VPS (Python, Docker, Coolify, headless Claude Code).
- Built the website for our AI engineering service in Next.js and TypeScript on Cloudflare Workers, with Stripe payments, Umami analytics and tests in Playwright and Vitest.
- Stack: TypeScript, React, Next.js, Node.js, Express, Python, Cloudflare Workers, Docker, Claude Code, Grok Bot.

Senior Frontend Developer · InnoIT Consulting, for Mango

04/2022 - Present · Barcelona, Spain (remote)

- Work on Mango's main checkout and payment flow, used by more than 20 million customers in 110+ countries, and on other projects across its digital ecosystem.
- Built independent microfrontends that plug into the e-commerce platform, so each team can release without waiting on the others.
- Next.js monorepo shared by every market, built for performance and developer experience.
- Daily work with design, backend and QA so checkout looks and behaves the same in every locale.
- Stack: TypeScript, React, Next.js, GraphQL, CSS Modules, Webpack, Vite, Turbopack, Jest, AWS, Jenkins.

Senior Frontend Developer · Telefónica, 5Gnow project

11/2021 - 04/2022 · Madrid, Spain (remote)

- Real-time dashboard to manage 5G and IoT SIMs for enterprise clients (5G for Industry 4.0).
- Graph-based monitoring and control screens for networks of devices.
- Domain-driven design, component-level performance work, and tests in Cypress and Jest.
- Stack: React, TypeScript, MUI, Storybook, Formik, Cypress, Webpack, Docker, Jenkins.

Full-Stack Developer · Telefónica, Aura and Living Apps (Movistar+)

12/2020 - 11/2021 · Madrid, Spain (remote)

- Interactive TV apps (Living Apps) for Movistar+ and Movistar Home devices.
- Shared TV component library, reused across several apps to unify the design and improve performance.
- Voice dialogs integrated with Aura, Telefónica's virtual assistant.
- Stack: TypeScript, React, Node.js, Express, Rollup, Jest, Azure, GitHub CI/CD.

Full-Stack Developer · Nutrilieve

12/2019 - 12/2020 · Barcelona, Spain (remote)

- Built a cross-platform nutrition app for cancer patients, with a Dialogflow chatbot for personalised advice.
- Stack: JavaScript, Next.js, Node.js, Firebase.

Freelance Software Developer

02/2018 - 09/2023 · Burgos, Spain (remote)

- React web apps, database migrations and Shopify storefront work for clients.
- Web3 studio, as part-time co-founder (02/2022 - 09/2023): admin panels with wallet integrations, token analytics and backend APIs, plus deployments, CI/CD and mentoring. Stack: Next.js, TypeScript, Solidity, Ethers.js, PostgreSQL, AWS.
- Cuna del Alma (2021): real estate website in Next.js and Prisma.
- Melone, as co-founder (10/2018 - 03/2019): React Native app that scans food barcodes and charts their nutritional information.
- ASAM Burgos (2018): moved their data from Excel to MongoDB and built a React app to manage it.

EDUCATION

Official Master's Degree in Mobile Application Development

Universitat Oberta de Catalunya · 09/2017 - 11/2018

Bachelor's Degree in Multimedia

Universitat Politècnica de Catalunya · 09/2013 - 07/2017

CERTIFICATIONS

- Explorer Business Project Development, Banco Santander (06/2024)
- Three.js Journey, Bruno Simon (10/2023)
- Google Project Management Certificate, Google (07/2022)

SKILLS

- Frontend: React, Next.js, TypeScript, JavaScript, React Native, Astro
- Styling: CSS Modules, SASS/SCSS, Tailwind CSS, MUI, Storybook
- Backend and data: Node.js, Express, GraphQL, PostgreSQL, MongoDB, Firebase, Python
- AI-assisted development: Claude Code, Grok Bot, issue-to-PR workflow, code review of agent output
- Testing: Jest, Vitest, Cypress, Playwright
- Cloud and DevOps: AWS, Azure, Cloudflare Workers, Docker, Jenkins, GitHub CI/CD
- Practices: frontend architecture, microfrontends, DDD, web performance
